Jeroen Meeder
Commercial Director

Dear Sir or Madam,

Perennial production should be predictable. Sales should be smooth. And the final result should be exactly what the market expects. In practice, this means plants with stable growth, wide production windows and quality that can be easily replicated – regardless of conditions or production strategy.

The 2027 perennial young plant catalogue was created for growers who want to plan the season more effectively, reduce risk and respond more quickly to market demands. It features varieties proven both in container production and landscape use, offering real flexibility in planting dates, pot sizes and timing of sales.

This season, we place special emphasis on varieties that extend the offering throughout the year, simplify logistics and present a "sale-ready" appearance without unnecessary interventions:

Phlox paniculata Blue Dolphin

A compact phlox for the second half of the season, naturally completing the summer sales program.

Rudbeckia hirta Littlebeckia™ Moonwalk

Long-lasting, even flowering and a stable habit that maintains quality throughout summer and autumn.

Geranium hybrida Shades of Purple

A Geranium with an exceptionally long retail window, offering great flexibility in planning plant availability.

We would also like to draw attention to the **Fresh 40** standard – young plants supplied in trays of 40 cells with a 5 cm plug, designed for simple, fast and uniform production. This solution is intended for production cycles of **6–10 weeks** and is recommended for growing directly outdoors, in **3–5 litre** containers, wherever speed, quality and consistency matter most.

We invite you to explore the full 2027 catalogue, developed to support your production from the very first young plant through to the moment of sale.

Vitroflora & Alkemade Perennials Team

We are a proud member of:

Szanowni Państwo,

Produkcja bylin powinna być przewidywalna. Sprzedaż – płynna. A efekt końcowy dokładnie taki, jakiego oczekuje rynek. W praktyce oznacza to rośliny o stabilnym wzroście, szerokich oknach produkcyjnych i jakości, którą można łatwo powtarzać – niezależnie od warunków czy przyjętej strategii produkcji.

Katalog sadzonek bylin i traw 2027 powstał z myślą o producentach, którzy chcą skuteczniej planować sezon, ograniczać ryzyko i szybciej reagować na potrzeby rynku. Zawiera odmiany sprawdzone zarówno w produkcji pojemnikowej, jak i w zastosowaniach krajobrazowych, oferując realną elastyczność w terminach sadzenia, wielkościach doniczek oraz momentach sprzedaży.

W tym sezonie szczególną uwagę poświęcamy odmianom, które wydłużają ofertę w ciągu roku, upraszczają logistykę i prezentują „gotowy do sprzedaży" wygląd bez konieczności zbędnych zabiegów:

Floks wiechowaty (Phlox paniculata) Blue Dolphin
Kompaktowy floks na drugą połowę sezonu, naturalnie domykający letni program sprzedaży.

Rudbekia owłosiona (Rudbeckia hirta) Littlebeckia™ Moonwalk
Długie, wyrównane kwitnienie i stabilny pokrój utrzymujący jakość przez całe lato i jesień.

Bodziszek (Geranium hybrida) Shades of Purple
Bodziszek o wyjątkowo długim oknie sprzedażowym, dający dużą swobodę w planowaniu dostępności roślin.

Zwracamy również uwagę na standard **Fresh 40** – młode rośliny dostarczane w multiplatach po 40 komórek z bryłą 5 cm, zaprojektowane z myślą o prostej, szybkiej i wyrównanej produkcji. Rozwiązanie to przeznaczone jest dla cykli produkcyjnych trwających **6–10 tygodni** i rekomendowane do uprawy bezpośrednio na zewnątrz, w pojemnikach **3–5 litrowych**, wszędzie tam, gdzie liczą się szybkość, jakość i powtarzalność.

Zapraszamy do zapoznania się z pełnym katalogiem 2027, stworzonym po to, by wspierać Twoją produkcję od pierwszej młodej rośliny aż do momentu sprzedaży.

Zespół Vitroflora i Alkemade Perennials

Sehr geehrte Damen und Herren,

Die Produktion von Stauden sollte planbar sein. Der Verkauf reibungslos verlaufen. Und das Endergebnis genau den Erwartungen des Marktes entsprechen. In der Praxis bedeutet das Pflanzen mit stabilem Wachstum, breiten Produktionsfenstern und einer Qualität, die sich unabhängig von Bedingungen oder Produktionsstrategie zuverlässig reproduzieren lässt.

Der Stauden Jungpflanzenkatalog 2027 wurde für Produzenten entwickelt, die ihre Saison effizienter planen, Risiken reduzieren und schneller auf Marktanforderungen reagieren möchten. Er enthält Sorten, die sich sowohl in der Containerproduktion als auch in der Verwendung im Landschaftsbau bewährt haben und echte Flexibilität bei Pflanzterminen, Topfgrößen und Verkaufszeitpunkten bieten.

In dieser Saison legen wir besonderen Wert auf Sorten, die das Angebot über das Jahr hinweg erweitern, die Logistik vereinfachen und ein „verkaufsfertiges" Erscheinungsbild ohne unnötige Eingriffe zeigen:

Phlox paniculata Blue Dolphin
Ein kompakter Phlox für die zweite Saisonhälfte, der das Sommerverkaufsprogramm ideal ergänzt.

Rudbeckia hirta Littlebeckia™ Moonwalk
langlebige, gleichmäßige Blüte und ein stabiler Wuchs, der Qualität über Sommer und Herbst hinweg sichert.

Geranium hybrida Shades of Purple
ein Geranium mit außergewöhnlich langem Verkaufsfenster und hoher Flexibilität bei der Verfügbarkeitsplanung.

Besonders hinweisen möchten wir auch auf den **Fresh 40** Standard – Jungpflanzen in 40er Trays mit 5 cm Topfballen, konzipiert für eine einfache, schnelle und gleichmäßige Produktion. Diese Lösung ist für Produktionszyklen von **6–10 Wochen** ausgelegt und wird für den Anbau im Freiland in **3–5 Liter** Containern empfohlen – überall dort, wo Geschwindigkeit, Qualität und Konstanz entscheidend sind.

Entdecken Sie den vollständigen Katalog 2027, der Ihre Produktion vom ersten Jungpflanzenstadium bis zum Verkaufszeitpunkt gezielt unterstützt.

Vitroflora & Alkemade Perennials Team

Geachte heer/mevrouw,

De productie van vaste planten moet voorspelbaar zijn. De verkoop soepel verlopen. En het eindresultaat moet exact aansluiten bij wat de markt verwacht. In de praktijk betekent dit planten met een stabiele groei, brede productievensters en een kwaliteit die eenvoudig te reproduceren is – ongeacht omstandigheden of productiestrategie.

De catalogus vaste planten – jonge planten 2027 is ontwikkeld voor telers die hun seizoen effectiever willen plannen, risico's willen beperken en sneller willen inspelen op marktbehoeften. De catalogus bevat rassen die zowel in containerteelt als in landschappelijke toepassingen zijn bewezen en biedt echte flexibiliteit in plantdata, potmaten en verkoopmomenten.

Dit seizoen leggen we extra nadruk op rassen die het assortiment door het jaar heen verlengen, de logistiek vereenvoudigen en een "verkoopklare" uitstraling hebben zonder onnodige ingrepen:

Phlox paniculata Blue Dolphin
Een compacte phlox voor de tweede helft van het seizoen, die het zomerverkoopprogramma op natuurlijke wijze afrondt.

Rudbeckia hirta Littlebeckia™ Moonwalk
Langdurige, gelijkmatige bloei en een stabiele plantopbouw die kwaliteit behoudt van zomer tot herfst.

Geranium hybrida Shades of Purple
Een Geranium met een uitzonderlijk lang verkoopvenster en grote flexibiliteit bij de planning van beschikbaarheid.

Daarnaast vestigen wij graag de aandacht op de **Fresh 40** standaard – jonge planten geleverd in trays van 40 cellen met een plug van 5 cm, ontworpen voor een eenvoudige, snelle en uniforme productie. Deze oplossing is bedoeld voor productieschema's van **6–10 weken** en wordt aanbevolen voor directe buitenteelt in containers van **3–5 liter**, waar snelheid, kwaliteit en consistentie centraal staan.

Wij nodigen u van harte uit om de volledige catalogus 2027 te ontdekken, ontwikkeld om uw productie te ondersteunen vanaf de eerste jonge plant tot aan het verkoopmoment.

Vitroflora & Alkemade Perennials Team

CYRILLIC SCRIPT

Уважаемые дамы и господа!

Производство многолетних растений должно быть предсказуемым. Продажи — стабильными. А конечный результат — полностью соответствующим ожиданиям рынка. На практике это означает растения со стабильным ростом, широкими производственными окнами и качеством, которое легко воспроизводить независимо от условий или выбранной производственной стратегии.

Каталог многолетних растений — молодых растений 2027 года создан для производителей, которые хотят эффективнее планировать сезон, снижать риски и быстрее реагировать на запросы рынка. В него вошли сорта, проверенные как в контейнерном производстве, так и в ландшафтном использовании, обеспечивающие реальную гибкость в сроках посадки, объёмах контейнеров и сроках реализации.

В этом сезоне мы уделяем особое внимание сортам, которые расширяют предложение в течение всего года, упрощают логистику и имеют «готовый к продаже» внешний вид без необходимости дополнительных вмешательств:

Phlox paniculata Blue Dolphin
компактный флокс для второй половины сезона, естественно завершающий летнюю программу продаж.

Rudbeckia hirta Littlebeckia™ Moonwalk
продолжительное и равномерное цветение, стабильная форма растения, сохраняющая качество летом и осенью.

Geranium hybrida Shades of Purple
герань с исключительно длинным окном продаж, обеспечивающая гибкость в планировании наличия продукции.

Также обращаем внимание на стандарт **Fresh 40** — молодые растения, поставляемые в кассетах по 40 ячеек с субстратным комом 5 см, разработанные для простой, быстрой и равномерной продукции. Это решение предназначено для производственных циклов продолжительностью **6–10 недель** и рекомендовано для выращивания непосредственно на открытом воздухе в контейнерах объёмом **3–5 литров**, где особенно важны скорость, качество и стабильность.

Приглашаем вас ознакомиться с полным каталогом 2027 года, созданным для поддержки вашего производства — от первой молодой растения до момента продажи.

Команда Vitroflora и Alkemade

A strategy rooted in nature

Strategia ukorzeniona w naturze

We work for your success

Our processes, data and way of working aren't just theory — they're designed to make your production easier, more predictable and more profitable.

1. Stable processes = stable supply quality

We operate based on defined processes and metrics, ensuring that:

- deliveries are consistent,
- material quality is predictable,
- the risk of seasonal surprises is minimal.

For you, this means: peace of mind when planning production and the certainty that the material 'maintains its standard'.

2. A range developed on the basis of data = reliable varieties

Our varieties undergo field trials and are developed on the basis of real market data — not intuition. As a result, you get:

- varieties that prove popular with customers,
- a lower rate of complaints,
- higher turnover on your shelves.

3. Sustainable production = a stronger brand for your business

We use renewable energy, reduce CO_2, and limit the use of peat and chemical pesticides — this builds value not only for our plants, but also for your brand. Your customers get environmentally friendly products, and you can say: "I sell responsibly produced plants".

4. Investment in people and technology = fewer mistakes, more support

The Vitroflora team works to a single methodology, develops its skills and uses advanced digital tools. In practice, this means for you:

- faster responses to queries,
- better communication,
- clear information on varieties and production,
- real help with seasonal planning.

Pracujemy na Twój sukces

Nasze procesy, dane i sposób działania nie są teorią — są po to, by Twoja produkcja była łatwiejsza, bardziej przewidywalna i rentowna.

1. Stabilne procesy = stabilna jakość dostaw

Pracujemy w oparciu o zdefiniowane procesy i mierniki, dzięki czemu:

- dostawy są powtarzalne,
- jakość materiału przewidywalna,
- ryzyko sezonowych niespodzianek minimalne.

To oznacza dla Ciebie: spokój w planowaniu produkcji i pewność materiału, który „trzyma poziom".

2. Oferta tworzona na podstawie danych = pewne odmiany

Nasze odmiany przechodzą testy terenowe i są rozwijane na podstawie realnych danych rynkowych — nie intuicji. Dzięki temu otrzymujesz:

- odmiany, które sprawdzają się u odbiorców,
- mniejszy odsetek reklamacji,
- większą rotację na Twoich półkach.

3. Zrównoważona produkcja = mocniejsza marka Twojej firmy

Stosujemy OZE, redukujemy CO_2, ograniczamy torf i chemiczne środki ochrony — to buduje wartość nie tylko naszych roślin, ale też Twojej marki. Twoi klienci zyskują produkty przyjazne środowisku, a Ty możesz komunikować: „Sprzedaję rośliny wyprodukowane odpowiedzialnie".

4. Inwestycja w ludzi i technologie = mniej błędów, więcej wsparcia

Zespół Vitroflory pracuje w jednej metodyce, rozwija kompetencje i korzysta z zaawansowanych narzędzi cyfrowych. W praktyce oznacza to dla Ciebie:

- szybszą reakcję na pytania,
- lepszą komunikację,
- jasne informacje o odmianach i produkcji,
- realną pomoc przy planowaniu sezonów.

Reliable & tested varieties

Niezawodne i przetestowane odmiany — jakość sprawdzona w praktyce

At Vitroflora, we know that a good variety must perform well not only in the greenhouse, but above all in real-world growing conditions. That is why, before any variety is added to our range, it undergoes a multi-stage testing process across various climate zones in Europe.

1. Field trials — plants tested where they will be grown

Our varieties are evaluated in fields and test tunnels at various locations across Europe, including for:

- growth stability,
- weather resistance,
- plant habit quality,
- predictability of performance throughout the season.

This ensures you receive varieties you can rely on — ones that behave predictably and minimise the risk of production issues.

2. Living Catalog

In Trzęsacz, we maintain one of the largest commercial collections of perennials in Europe — our Living Catalog. Here, we compare hundreds of varieties growing under identical conditions, assessing their habit, vigour and appearance at various stages of the season. We also create most of our social media content here.

3. Staudensichtung

independent quality certification. Some of the varieties in our range have received awards from Staudensichtung — one of Europe's most prestigious programmes for assessing the durability and utility value of perennials. These are long-term, rigorous tests conducted in various locations and under variable weather conditions. Varieties are assessed, among other things, for:

- durability,
- hardiness,
- stable growth,
- ornamental and horticultural value.

These aren't just catalogue tests — they're real-world trials in actual gardens and landscapes. This guarantees that you're buying plants that will also thrive for your customers.

Why is all this important to you?

- Lower production risk — because the varieties are predictable and stable
- Fewer complaints — because the plant's quality is proven in the field
- Greater sales confidence — because the plants perform well 'in the field'
- A premium offering — backed by independent recommendations

Vitroflora
Living Catalog - Poland

Staudensichtung

Vitroflora
spring perennials

W Vitroflorze wiemy że dobra odmiana musi sprawdzić się nie tylko w szklarni, ale przede wszystkim w realnych warunkach uprawy. Dlatego każda odmiana, zanim trafi naszej oferty, przechodzi wielostopniowy proces testów w różnych strefach klimatycznych Europy.

1. Testy terenowe — rośliny sprawdzane tam, gdzie będą pracować

Nasze odmiany są oceniane na polach i w tunelach testowych w różnych lokalizacjach w Europie, m.in. pod kątem:

- stabilności wzrostu,
- odporności na warunki pogodowe,
- jakości pokroju,
- przewidywalności zachowania w sezonie.

Dzięki temu dostajesz odmiany, których możesz być pewien — takie, które zachowują się przewidywalnie i minimalizują ryzyko problemów produkcyjnych.

2. Żywy Katalog

W Trzęsaczu prowadzimy jedną z największych komercyjnych kolekcji bylin w Europie — nasze Living Catalog. Tutaj porównujemy setki odmian rosnących w identycznych warunkach, oceniamy ich pokrój, siłę wzrostu i wygląd w różnych fazach sezonu. A także tworzymy większość contentu na social media.

3. Staudensichtung (Ocena roślin wieloletnich)

niezależne potwierdzenie jakości. Część odmian z naszej oferty zdobyła wyróżnienia w Staudensichtung — jednym z najbardziej prestiżowych europejskich programów oceny trwałości i wartości użytkowej bylin.
Te wieloletnie, dokładne testy prowadzone są w różnych lokalizacjach i zmiennych warunkach pogodowych.
Odmiany oceniane są m.in. pod kątem:

- trwałości,
- odporności,
- stabilnego wzrostu,
- wartości dekoracyjnej i ogrodniczej.

To nie są testy katalogowe — to prawdziwe sprawdziany w realnych ogrodach i krajobrazie.
Dzięki temu masz gwarancję, że kupujesz rośliny, które sprawdzą się także u Twoich klientów.

Dlaczego to wszystko jest dla Ciebie ważne?

- Niższe ryzyko w produkcji — bo odmiany są przewidywalne i stabilne
- Mniejszy odsetek reklamacji — bo roślina ma realnie potwierdzoną jakość
- Większa pewność sprzedaży — bo rośliny sprawdzają się „w terenie”
- Oferta premium — wzmocniona niezależnymi rekomendacjami

4

filary naszej filozofii

pillars of our philo-sophy

Closed-loop water system
Zamknięty obieg wody

We reuse up to 80% of our water, and collect rainwater in large tanks, which are used to water our greenhouses and test plots.

Ponownie wykorzystujemy do 80% wody, a deszczówkę gromadzimy w dużych zbiornikach, które służą do podlewania szklarni i poletek testowych.

Climate-friendly energy
Energetyka przyjazna klimatowi

We invest in renewable energy sources and pursue a consistent decarbonisation policy, reducing CO_2 emissions and energy consumption.

Inwestujemy w odnawialne źródła energii i realizujemy konsekwentną politykę dekarbonizacji, redukując emisję CO_2 oraz zużycie energii.

Biodiversity at the heart of our activities
Bioróżnorodność w centrum działań

Our perennials support pollinators and create diverse, stable ecosystems — in private gardens and public spaces.

Nasze byliny wspierają zapylacze i tworzą różnorodne, stabilne ekosystemy — w ogrodach prywatnych i w przestrzeni publicznej.

Natural crop protection
Naturalna ochrona upraw

We are in the process to replace chemical agents with biological and biorational methods, ensuring safer production and a healthier environment.

Zastępujemy środki chemiczne metodami biologicznymi i bioracjonalnymi, zapewniając bezpieczniejszą produkcję i zdrowsze środowisko.

Discover our spring perennials program!

What exactly is this about?

Spring perennials are a carefully selected group of nearly 100 varieties, which, thanks to their natural overwintering in the nursery, are the first to enter the market. Their selection is not accidental: it is the result of years of observations and testing conducted both in western Poland and western Germany, where we analyze hardiness, growth rate, flowering quality, and stability in various weather conditions. Only varieties that have proven their reliability, durability, and decorative effect in real-world production are included in the program.

By ordering seedlings now, you will offer your customers an early-flowering, distinctive assortment next year that will ensure a great start to the season. This offer is aimed at gardeners producing plants for garden centers and retailers, as well as those who run their own shops and want to enhance their business with an attractive, sales-friendly spring display.

O co właściwie chodzi?

Byliny wiosenne to starannie wyselekcjonowana grupa prawie 100 odmian, które dzięki naturalnemu przezimowaniu w szkółce jako pierwsze wchodzą na rynek. Ich wybór nie jest przypadkowy: to rezultat wieloletnich obserwacji i testów prowadzonych zarówno w zachodniej Polsce, jak i w zachodnich Niemczech, gdzie analizujemy odporność, tempo wzrostu, jakość kwitnienia i stabilność w różnych warunkach pogodowych. Do programu trafiają tylko te odmiany, które udowodniły swoją niezawodność, trwałość i efekt dekoracyjny w realnej produkcji.

Zamawiając sadzonki już teraz, w przyszłym roku zaoferujesz swoim klientom wczesnokwitnący, wyróżniający się asortyment, który zapewni świetny start sezonu. Oferta jest skierowana do ogrodników produkujących rośliny dla centrów ogrodniczych i punktów detalicznych, a także tych, którzy prowadzą własne sklepy i chcą wzmocnić je atrakcyjną, pewną sprzedażowo wiosenną ekspozycją.

General growing guide

(does not include specific requirements of individual varieties)

Planting:
Weeks 28-34 (up to 36 in smaller containers), outdoors, pots 9 to 23 cm

Soil:
Well-drained, less clay, protects against overwatering after thaw

Winter Storage (3 options):

- Outdoors
- Outdoors covered with fleece
- In an unheated tunnel

Watering:
Do not allow to dry out (especially in the tunnel)

Fertilization:
In autumn, emphasize PK fertilization, Osomocote Exact Protect can be used, and in spring, Osmocote Topdress or fertigation

Care:
Remove dead above-ground parts before vegetation

Other Information:

- The more green mass in autumn, the better the spring flowering.
- Flowering from weeks 16 to 22.
- Can be accelerated in the tunnel (but too high a temperature will cause run-off).
- Dormant species (e.g., Dicentra) can be stacked in the tunnel.
- If the plants are stored frost-free and retain their leaves, pruning is not necessary (e.g., Pulmonaria, Geum).

Ogólne zalecenia uprawowe

(nie obejmują specyficznych wymagań poszczególnych odmian)

Sadzenie:
W tygodniach 28 - 34 (do 36 w mniejsze pojemniki), na zewnątrz, doniczki od 9 do 23 cm

Podłoże:
Z dobrym drenażem, mniej glinki, zabezpieczające przed przelaniem po roztopach

Przechowywanie zimą (3 opcje):

- Na zewnątrz
- Na zewnątrz przykryte włókniną
- W nieogrzewanym tunelu

Podlewanie:
Nie dopuścić do wyschnięcia (zwłaszcza w tunelu)

Nawożenie:
Jesienią zaakcentować nawożenie PK, można zastosować Osomocote Exact Protect, wiosną Osmocote Topdress bądź fertygację

Pielęgnacja:
Oczyszczenie z martwych części nadziemnych przed wegetacją

Pozostałe informacje:

- Im więcej masy zielonej jesienią tym lepsze kwitnienie wiosną
- Kwitnienie od 16 do 22 tygodnia
- Możliwość przyspieszania w tunelu (ale zbyt wysoka temperatura spowoduje wybiegnięcie)
- Możliwość sztaplowania w tunelu gatunków wchodzących w spoczynek (np. Dicentra)
- Jeżeli przechowa się rośliny bez mrozu i utrzymają liście nie trzeba będzie oczyszczać (np. Pulmonaria, Geum)

Advantages of spring perennials:

Earlier market launch:
blooming as early as mid-April.

Filling the sales gap
between mid-April and mid-May.

Wider diversity of products
at the point of sale.

Inventory security:
longer shelf life
than pansies and primroses,
less competition from retailers.

No peak season:
plants ready for sale
straight from the field.

Better quality:
vernalization ensures a compact habit,
strong flowers, and natural hardiness.

Proven hardiness:
overwintering outdoors
= natural hardening off.

a full range of spring perennials

Zalety bylin wiosennych:

Wcześniejsze wejście na rynek:
kwitnienie już w połowie kwietnia.

Wypełnienie luki sprzedażowej
pomiędzy połową kwietnia a połową maja.

Większa różnorodność asortymentu
w punkcie sprzedażowym.

Bezpieczeństwo zapasów:
dłuższa trwałość
niż bratki i prymule,
mniejsza konkurencja sieci

Brak spiętrzenia prac w sezonie:
rośliny gotowe do sprzedaży
prosto z zagonów.

Lepsza jakość:
dzięki wernalizacji zwarty pokrój,
mocne kwiaty, naturalna odporność.

Potwierdzona odporność:
zimowanie na zewnątrz
= naturalne hartowanie.

pełen asortyment bylin wiosennych

Young plant material in T-40 for quick production

- Easy and quick production!
- High quality!
- Available weeks 18-20!

Fresh 40

Fresh 40
Tray T-40
plug Ø 5cm

- **Designed for fast, easy and straight quality crops in 6-10 weeks**
- **Selected assortment, only the best varieties!**
- **Recommended for 3-5L pots, for outdoor production**
- **Plants offered in 40 cell tray, cell Ø 5cm in weeks 18-20**
- **Flowering material ready for sale in weeks 24-27**
- **Vigorous plants from early spring production from our farm located in Portugal**

VITROFLORA®

Heliopsis helianthoides

Oriole™ Single Yellow

New standard in Heliopsis.
Spectacular golden flower power.
Long flowering period and long shelf life of the flowers!
Excellent branching and vigorous growth
makes this new variety really suitable different.
Great for pot production but also for the landscape.
Fully winterhardy.

Lythrum hybrida

Luminara

Lythrum with excellent branching and strong colours. Whole bunch of flower stems are fully covered with adorable flowers, and dance on the wind true the whole summer. Long flowering period. Dark green foliage add depth to the plants. Medium growth and quick production makes it great for visual pot production!

Nepeta hybrida

Blue Planet

Big flowers! Good branching! Quick production! That is all you need to know about this Nepeta.

Big blue flowers gathered in dense clusters on strong stems which will flower for months in summer. Healthy and scented foliage. Attracted for pollinators. Medium controlled growth and mounded habit. Fully winterhardy, makes it great for every garden and landscape.

L V NEW

This exclusive Vitroflora variety enchants with a mesmerizing mosaic of blue tones — from soft sky hues to deep sapphire shades — illuminated by delicate purple accents at the center of each bloom. The layered color effect creates a living tapestry that distinguishes it instantly from standard varieties. Similar in habit and cultivation to the Phlox Flame series, it offers elegant structure combined with vibrant energy, making it a standout feature in premium spring and summer programs.

Why choose Pretty Polly?

Early bloomers – these are among the first perennials to bring your garden to life.
Perennials – they delight the eye for many seasons.
Versatile – they work great not only in flowerbeds but also in arrangements on balconies and terraces.
You can easily fit them into any space – from garden beds to balcony planters.
Pretty Polly is synonymous with spring joy and harmony, a must-have in your surroundings.
Add color to your garden and welcome spring with Pretty Polly!

Silene virginiaca

Burning Heart

A truly striking introduction, this Silene captivates with its exceptionally deep red blooms — a rare intensity of color within the genus. After vernalisation, the plant unfolds a powerful yet refined floral display that immediately commands attention. Perfectly suited for 2–3 L containers, it forms a compact, high-impact specimen ideal for premium spring assortments. Flowering in late spring to early summer, it delivers a bold statement of color precisely at the height of the season.

L NEW

Scirpus pendulus

Stars & Stripes

The most striking yellow variegated foliage. It is great for annual but also for bi-annual production. Great to grow indoor and outdoor. Sun resistant! In spring there are very typical but attractive flowers

Perennials

Byliny

How to use Vitroflora website?

In a few simple steps, you will learn how to create an account, order young plants, and use additional tools that support sales and production planning.

Please be advised that the offer presented in the catalogue may be subject to change. Offer details are updated on an ongoing basis. The current offer is always available on our website.

Access to the Vitroflora website

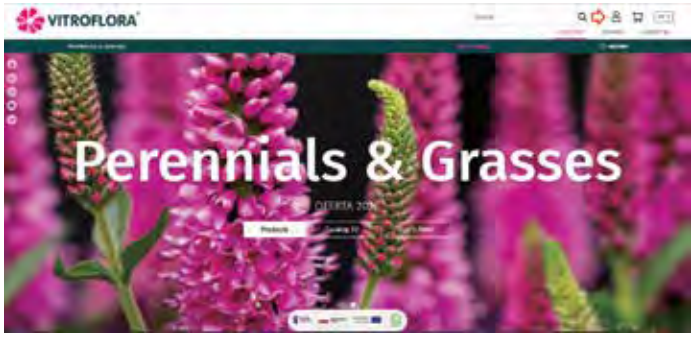

You can access the Vitroflora website easily using any device with an internet connection, including:

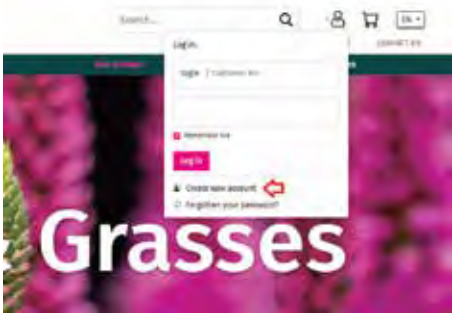

- a desktop computer or laptop,
- a tablet,
- a mobile phone.

Open your preferred web browser and enter **vitroflora.com** in the address bar.

Once the page loads, select the language version that best suits your needs. The website is available in several language options, allowing you to browse product information, availability, and tools in a clear and convenient way, regardless of the device you are using.

Registration on the website

1. In the top right-hand corner, select the user profile icon. Click ‘Create a new account’. Then select the ‘Professional’ option and ‘I am a new user’.
2. Fill in the details regarding your business and your personal details. (If you do not have a VAT number, enter your National Insurance number). Remember to fill in your contact details correctly. These will be needed for communication regarding orders and to receive the code confirming your account registration.
3. Next, specify the nature of your business and the information you wish to receive by email (news, surplus seedlings, special offers). You can also opt in to receive offers via text message.
4. Once you have completed the form, click ‘Submit application’. You will receive an email and an SMS with an activation code to activate your account. After entering this code, you will receive a customer number (it is important to make a note of this, as it is required for logging in) and you will set a password.
5. At this point, your account is active and allows you to browse the full range of products and use the tools available on the website.

Placing orders

You can place an order in the following ways:

- from the product page,
- via the Availability module,
- Orders → New order.

Placing orders from the product page

1. On the page for the plant you are interested in, below its description, there is a table showing details about the youngplants and availability dates. The availability date is indicated by the week number in which the seedlings arrive at the specified location. To select a delivery date, click on the week number in which you wish to receive the seedlings.
2. A window will open confirming the date and allowing you to specify the number of pallets of seedlings. After selecting the quantity and confirming the date, you can continue shopping or proceed to the basket.

Placing orders via the Availability module

1. On the product list, switch the view to the Availability module to display current availability by delivery week.
2. Review the list and click on the week number in which you would like to receive the plants. The week number indicates the planned delivery date to the selected location.
3. A window will open allowing you to specify the required quantity of plants for the selected week. Enter the desired amount.
4. After selecting the quantity, confirm your choice by clicking “Add to cart”.

Placing orders via Orders → New order

1. From the Orders menu, select New Order to start creating a new order.
2. Choose the product group, product form, and delivery date that match your needs.
3. At this stage, you can also use the option to copy an order from previous seasons, which allows you to reuse earlier order structures and save time.
4. Select Create order form to place the order directly online, or choose Create order sheet if you prefer to prepare your order using an Excel file.
5. Enter the required quantities of plants for each selected item.
6. If you have completed your order in Excel, you can upload the order sheet here and add it to the system.
7. Once all quantities have been selected, confirm your choices by clicking "Add to cart".

Finalizing the orders

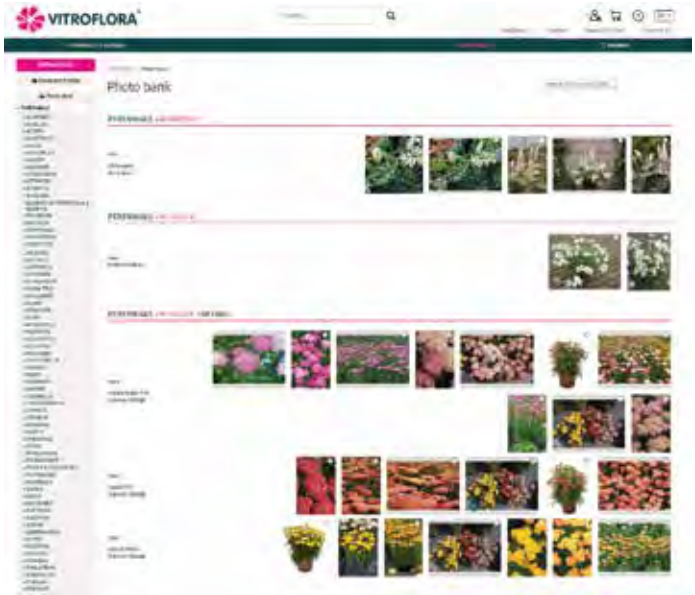

1. Finalizing your order begins in the shopping cart, where you can still adjust quantities, add new products, or remove selected items.
2. If you already have an order for the selected delivery week, the new items will be added to the existing order for that week.
3. Select the preferred delivery or collection method for your order.
4. Click “Please summarise the order” to proceed to the summary stage.
5. In the next step, you can add a note to the order, change the delivery week, and update your address or contact details if needed.
6. To place the order, confirm everything by clicking “Finalize the order”

Checking my orders

1. To check the status of your orders and your purchase history, select ‘Orders’ and then ‘My orders’ in the top right-hand corner.
2. A summary table for plant groups will appear. You can view the details by selecting a group and clicking “Show order summary for the 2026 season”.
3. The summary includes varieties, quantities, prices, order statuses for the given week and unit prices.
4. Below the table, there is a list of all orders for the current season, which can be viewed individually.
5. The order details include current notes on changes and additions. You can also order labels and download a summary confirmation there.

Photo library

1. Customers who have purchased young plants may use variety photos for marketing purposes, both in print and online.
2. Access the Photo Library via the Orders menu. It includes photos linked to the plants you have purchased.
3. Two selection modes are available: General – select a plant group and access photos of all purchased varieties, Detailed – filter and select photos from a specific order.
4. Click on the photos to select them for download (no limit). Three file sizes are available – high resolution for print and lower resolution for online use.
5. Selected photos can be added to the photo basket or downloaded directly as a single ZIP file.
